

Jaylen Rider

jaylenr2002@icloud.com | [linkedin.com/in/jaylen-rider-746168254/](https://www.linkedin.com/in/jaylen-rider-746168254/) | github.com/jrock0824

Education

- B.S., Computer Science (Applied) | Minor: Management Information Systems, University of Central Oklahoma – May 2026

Technical Skills

- Python (FastAPI, LangChain), Bash, SQL/PostgreSQL; backend APIs and automation; Docker, Linux, Git, deployment automation.
- LangChain, Ollama, prompt engineering, LLM guardrails, context retrieval and workflow orchestration for LLM-powered systems.
- Linux security (auditd), SIEM design, security monitoring and automation, API security and authentication; Agile/Scrum, Security by Design, privacy-first architecture.

Experience

Ezra Intelligence — Applied AI & Security Automation

Founder, Sole Software Engineer, and CTO | May 2025 – Present

MAGEN — Healthcare Security Platform

- Built a healthcare security platform with Python, FastAPI, PostgreSQL, Docker, and Linux to automate log correlation, anomaly detection, and alerting.
- Created tamper-resistant audit logging and on-prem deployment architecture to strengthen forensic integrity and reduce PHI exposure.
- Automated event collection, enrichment, and playbook execution, cutting investigation time by 80 percent for recurring security reviews.
- Developed statistical and LLM-assisted detection workflows with local Ollama inference, reaching 97 percent accuracy in internal insider-threat testing.

ASA — Trauma-Informed AI Platform

- Built a containerized AI platform with FastAPI, LangChain, PostgreSQL, and Docker for sensitive, high-risk support workflows.
- Implemented LLM guardrails, prompt filtering, and refusal logic to improve safety while preserving clarity and usefulness.
- Automated builds, migrations, and deployments in a Linux environment using Python scripting and Git-based workflows.
- Validated the platform with 15 users across 3 states and presented it at the 2026 i2E Entrepreneur's Cup, contributing to 1st Place in the 90-Second Pitch and 2nd Place in High Growth Undergraduate.

Security Projects

Privilege Escalation Detection & Forensic Automation (2-person project)

- Built Linux-based detection pipelines with auditd, Bash, and Python to monitor for privilege-escalation activity (e.g., sudo abuse, SUID paths) and generate structured alerts for investigation.
- Reduced mean time to detect simulated privilege-escalation events by 80 percent through automated log collection, correlation, and repeatable security playbooks.
- Authored detection rules and MITRE-style mappings and scripted event-driven workflows that apply DevOps-style automation concepts to security monitoring and incident response.

Leadership & Service

Omega Psi Phi Fraternity, Inc. – Sigma Kappa Chapter, UCO

- President, 2023–2025: Led chapter strategy, operations, and member development for a small, high-engagement chapter.

UCO – Capstone Project, Travel Assistance Web App

- Scrum Master, 2026: Ran Agile sprints for a cross-functional team building a full-stack travel assistance web app integrating third-party APIs; delivered 3 weeks early while meeting requirements.

Honors & Recognition

- 1st Place, 90-Second Pitch (High Growth Undergraduate), i2E Entrepreneur's Cup, 2026.
- 2nd Place, High Growth Undergraduate, i2E Entrepreneur's Cup, 2026.
- President of the Year, University of Central Oklahoma, 2026.
- Top Scholar Award, Ronald E. McNair Scholars Program, 2025–2026.
