

Jaylen Rider

jaylenr2002@icloud.com | [linkedin.com/in/jaylen-rider-746168254/](https://www.linkedin.com/in/jaylen-rider-746168254/) | github.com/jrock0824

Education

- B.S., Computer Science (Applied) | Minor: Management Information Systems, University of Central Oklahoma – May 2026

Technical Skills

- Security Operations & Detection: Log analysis, audit trail design, detection rule tuning, incident triage, risk classification, escalation workflows.
- Platforms & Identity: Linux security (auditd), SIEM concepts, Python security automation, Docker, Git, FastAPI, PostgreSQL, LangChain, Ollama; API security and authentication, JWT, RBAC, least privilege, Zero Trust patterns.
- Methodologies: STRIDE-style threat modeling, incident detection and response, privacy-first, compliance-aware architecture (HIPAA/FERPA).

Experience

Ezra Intelligence — Applied AI & Security Automation

Founder, Sole Software Engineer, and CTO | May 2025 – Present

MAGEN — Healthcare Security Platform

- Built a security monitoring platform using Python, FastAPI, PostgreSQL, Docker, and Linux to ingest and correlate Linux audit and application logs for anomaly detection and alerting in healthcare environments.
- Designed and implemented tamper-resistant audit logging and on-premises log retention to support forensic investigations and HIPAA-aligned compliance audits.
- Developed detection logic and automated workflows that classify and escalate events, reducing investigation time by 80 percent for recurring security reviews.
- Tuned statistical and LLM-assisted insider-threat detection rules with local Ollama inference, achieving 97 percent detection accuracy on defined test scenarios while limiting false positives.

ASA — Trauma-Informed AI Platform

- Built a containerized AI platform with FastAPI, LangChain, PostgreSQL, and Docker to handle sensitive user inputs in high-risk education and social-work contexts.
- Implemented multi-layer LLM safety controls (prompt filtering, guardrails, refusal logic) to detect and block unsafe requests, improving output safety while preserving clarity for users.
- Automated security-aware deployment workflows in a Linux environment using Python scripting, Git, and containerization to ensure consistent configurations across environments.
- Conducted structured user testing across 15 participants in 3 states, treating harmful-content handling and escalation behavior as incident scenarios and using findings to strengthen safety and compliance posture.

Security Projects

Privilege Escalation Detection & Forensic Automation (2-person project)

- Built Linux-based automation pipelines with auditd, Bash, and Python to detect privilege escalation and trigger structured alerting and responses.
- Reduced mean time to detect by 80% through automation, repeatable security playbooks, and MITRE ATT&CK-mapped detection rules.
- Developed event-driven analysis workflows applying DevOps-style automation concepts to security monitoring and incident response.

Leadership & Service

Omega Psi Phi Fraternity, Inc. – Sigma Kappa Chapter, UCO

- President, 2023–2025: Led chapter strategy, operations, and member development for a small, high-engagement chapter.

UCO – Capstone Project, Travel Assistance Web App

- Scrum Master, 2026: Ran Agile sprints for a cross-functional team building a full-stack travel assistance web app integrating third-party APIs; delivered 3 weeks early while meeting requirements.

Honors & Recognition

- 1st Place, 90-Second Pitch (High Growth Undergraduate), i2E Entrepreneur's Cup, 2026.
- 2nd Place, High Growth Undergraduate, i2E Entrepreneur's Cup, 2026.
- President of the Year, University of Central Oklahoma, 2026.
- Top Scholar Award, Ronald E. McNair Scholars Program, 2025–2026.
